

SS Adityaa

AI/ML | Full-Stack Developer

Chennai, Tamil Nadu | adityaa23110170@snuchennai.edu.in | +91 6381853163 | [LinkedIn](#) | [Portfolio](#)

Education

Shiv Nadar University, Chennai

2023–2027

Bachelor of Technology in Computer Science and Engineering (Internet of Things)

CGPA: 8.28 out of 10.0 (VI Semester)

Experience

Data Science Intern | Tekclover

May 2026 – July 2026

- Replaced a legacy rule-based slotting system (static if-else thresholds on item speed/size) with a hybrid CRITIC + AHP weighted efficiency scoring model, providing a data-driven, statistically grounded item-zone-month efficiency score across 300K+ records as the foundation for automated slotting optimization.
- Built a K-Means clustering pipeline with TOPSIS-based piecewise scoring and deployed it as a production FastAPI service connected directly to the warehouse's MS SQL Server database, enabling automated, real-time efficiency scoring in place of manual computation.
- Identified and fixed critical data integrity issues — data leakage in equipment baselines, unit mismatches, and hardcoded tier-mapping indices — improving model reliability.

Web Development Intern | Infolynix

Dec 2024 – July 2025

- Redesigned and modernized a legacy website for a US-based service company, independently selecting and customizing a Framer template, and implementing responsive layouts and interactive transitions to align with modern UX standards.
- Completed a 4-week structured training across Python, UI/UX Design, DBMS, and Excel/Power BI as part of internship onboarding.

Projects

RetailIQ – E-Commerce Analytics & Decision Support System

Mar 2026

Technologies: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Flask

- Built an end-to-end ETL pipeline processing 1M+ records (2-year Kaggle dataset) for scalable analytics and ML workflows, developing sales forecasting and customer churn prediction models.
- Designed and deployed a Flask-based dashboard visualizing model predictions and business insights for decision support.

GigScroll – AI-Powered Job Matching Platform

Dec 2025

Technologies: React, Node.js, Express.js, PostgreSQL, TypeScript, Prisma ORM, Tailwind CSS, JWT, Multer

- Architected a full-stack job discovery platform with a Tinder-style swipe UI and REST API, implementing a relational schema in PostgreSQL/Prisma ORM with a "Second Chance" mechanism to recover rejected applications.
- Built an intelligent resume-parsing engine achieving 90%+ skill-extraction accuracy across a diverse test set of unstructured PDF resumes, generating explainable "AI Insights" match reasons, with indexing strategies for complex filtering (Remote/Hybrid) and exclusion-based queries.

SlotSwapper – Calendar-Based Swap Management System

Nov 2025

Technologies: PostgreSQL, Express.js, React.js, Node.js, Prisma ORM, JWT, dayjs

- Solved a critical concurrency blocker in a calendar-based slot-swap marketplace by implementing atomic transactional logic (Prisma transaction), preventing race conditions and inconsistent state during simultaneous swap requests.
- Built a responsive calendar interface with React Query, using optimistic UI updates and dayjs-based date handling for real-time slot visualization and swap management.

Technical Skills

Languages: Java, Python, C, C++, TypeScript, JavaScript, SQL, HTML, CSS

Core CS: Data Structures, Algorithms, System Design

Machine Learning: Scikit-learn, TensorFlow, Data Preprocessing, Feature Engineering, Model Evaluation

Frameworks & Libraries: React.js, Node.js, Express.js, Flask, Tailwind CSS, React Query, Vite

Databases & ORM: MongoDB, MySQL, PostgreSQL, Prisma ORM

Tools & Deployment: Git, GitHub, Postman, JWT, bcrypt, Multer, Render, Vercel, Capacitor, Docker

Achievements

- HackerRank Java Certification** (Gold Badge, 5-Star)
- Google UX Design Professional Certificate** (Coursera)
- Organizing Committee** — Visual Media, SNU Chennai MUN (200+ participants)
